

BREAST CANCER PREVENTION NOTEBOOK

Habits, reminders, and space to track your own progress.

BROUGHT TO YOU BY

LOCK OF HOPES

INSIDE THIS NOTEBOOK

- What lowers risk, and what raises it
- Habits to build, with a checklist
- A monthly tracker and space for your own notes

PLEASE READ

This notebook is for awareness only. It does not replace medical advice, diagnosis, or a screening plan built with your doctor.

1 Why prevention matters

No habit can guarantee breast cancer never happens. But several everyday choices are linked to lower risk, and knowing your personal risk factors helps you and your doctor build the right screening plan.

Prevention and screening work together. One lowers your risk, the other catches what risk remains.

2 Habits linked to lower risk

Worth building into your routine

- Maintain a weight that is healthy for your body
- Stay physically active, aim for regular movement most days
- Limit alcohol, or avoid it altogether
- Avoid smoking, or take steps to quit
- Breastfeed if you are able to, even for a few months
- Limit long-term use of hormone therapy, and discuss options with your doctor

3 Know your risk factors

Factors you cannot change

- Being a woman, and getting older
- A family history of breast or ovarian cancer
- Known gene changes, such as BRCA1 or BRCA2
- Starting periods early or menopause later than average
- Dense breast tissue

Factors you have some control over

- Body weight, especially after menopause
- Alcohol intake
- Physical activity levels
- Smoking
- Long-term hormone therapy use

4 Your habit checklist

A simple set of habits to check off as you build them. Tick what already feels natural, and pick one new habit to work on this month.

- ☐ I move my body most days of the week.
- ☐ I limit alcohol, or do not drink.
- ☐ I do not smoke, or I am working on quitting.
- ☐ I eat a mix of fruit, vegetables, and whole grains most days.
- ☐ I know my family history of breast or ovarian cancer.
- ☐ I know when my next screening or self-exam is due.

5 Monthly habit tracker

Use this grid to check off your habits each week. A blank week is not a failure, it is just information, start again next week.

HABIT	WK 1	WK 2	WK 3	WK 4
Moved my body / exercised	☐	☐	☐	☐
Limited or skipped alcohol	☐	☐	☐	☐
Ate well (fruit, veg, whole grains)	☐	☐	☐	☐
Did my breast self-exam	☐	☐	☐	☐
Got enough sleep	☐	☐	☐	☐

6

My notes

Questions for your doctor, things you noticed, or reminders for next month.

7

Screening reminders

Prevention lowers risk, but screening is what catches cancer early, often before you could ever feel it.

- Most guidelines now recommend mammograms starting around **age 40**, repeated every one to two years.
- If you have a family history or a known genetic risk, screening may need to start earlier, ask your doctor.
- Keep doing monthly self-exams alongside clinical screening, not instead of it.

Build your own screening schedule with your doctor, based on your personal risk.

Small habits, kept up, add up.

Prevention is not one big change. It is the habits you repeat, month after month. Keep going.

LOCK OF HOPES

Come back to this notebook every month.

Awareness only. This notebook does not replace medical advice or screening tests.
